Exam : **C-ADBTP-2601**

Title : **Administrating SAP
Business Technology
Platform(C_ADBTP_2601)**

Vendor : **SAP**

Version : **DEMO**

QUESTION NO: 1

SIMULATION

Create Directories and Subaccounts

In a global account for SAP Business Technology Platform (BTP), create a hierarchy of subaccounts using directories.

Task 1: Create Directories

In your SAP BTP cockpit, create the directory Americas (Description: Americas Accounts) with your global account as the parent.

Create the directory Eurasia (Description: Eurasia Accounts) with your global account as the parent.

Create the directory Partner (Description: Partner Accounts) with the Americas directory as the parent. Add the label access with value external.

Create the directory Human Resources (Description: Human Resources Accounts) with the Eurasia directory as the parent. Add the label access with value internal.

Answer:

See the Explanation below for complete solution

Explanation:

Task 1: Create Directories

You need to create these directories:

Americas

Eurasia

Partner under Americas with label access=external

Human Resources under Eurasia with label access=internal

Before You Start

Log in to the SAP BTP Cockpit.

Make sure you are inside the correct Global Account.

Open the left-side navigation menu.

Why this is important:

All directories in this task must be created inside the correct global account hierarchy. If you create them in the wrong location, the simulation result will be incorrect.

Step 1 - Create Directory Americas

What to do

In the SAP BTP Cockpit, select your Global Account.

In the left navigation menu, click Directories.

Click Create or Create Directory.

Fill the fields as follows:

Name: Americas

Description: Americas Accounts

Parent: your Global Account

Click Create.

Create Directory

Display Name *

Americas

Description

Americas Accounts

Parent *

BTP Admin Certification xxxx

> **Advanced**

Cockpit supports multi-level directories in your account structure.

You can add your new directory directly to the root global account or to an existing directory by choosing the location under **Parent**.

Create

Cancel

Explanation:

This creates a top-level directory directly under the global account.

It will later be used as the parent for the Partner directory.

What to verify

After creation, you should see:

Americas

listed under the directories of the global account.

Step 2 - Create Directory Eurasia

What to do

Stay in Directories.

Click Create Directory again.

Fill the fields:

Name: Eurasia

Description: Eurasia Accounts

Parent: your Global Account

Click Create.

Create Directory

Display Name *	Description
<input type="text" value="Eurasia"/>	<input type="text" value="Eurasia Accounts"/>
Parent *	
<input type="text" value="BTP Admin Certification xxxx"/>	

> **Advanced**

Cockpit supports multi-level directories in your account structure.
You can add your new directory directly to the root global account or to an existing directory by choosing the location under **Parent**.

Create Cancel

Explanation:

This creates another top-level directory, parallel to Americas.

What to verify

You should now see both:

Americas

Eurasia

under the global account.

Step 3 - Create Directory Partner under Americas

What to do

In the Directories area, select Americas.

Click Create Directory.

Enter:

Name: Partner

Description: Partner Accounts

Parent: Americas

Locate the Labels section.

Add a new label:

Key: access

Value: external

Click Create.

Name	Type	Environment	Provider	Region	Changed On	
▼ BTP Admin Certification XXXXX	Global Account				March 25, 2025, 9:11:2...	...
Americas	Directory				March 26, 2025, 3:27:5...	...
Eurasia	Directory				March 26, 2025, 3:28...	...

Edit
Go to Overview
More Info
Create Directory
Create Subaccount
Delete

Select Parent

Show only directories I can create in [Expand All](#) [Collapse All](#)

▼ BTP Admin Certification **XXXXX**

- Americas
- Eurasia

Create Directory

Display Name *	Description
<input type="text" value="Partner"/>	<input type="text" value="Partner Accounts"/>
Parent *	
<input type="text" value="Americas"/>	

Advanced

Enable entitlement management ? Enable user management ?

Add labels to this directory. ?

Name:	Values:
<input type="text" value="access"/>	<input type="text" value="external"/>

Explanation:

This creates Partner as a child directory under Americas.

The label is required and must be entered exactly:

access = external

This label helps classify the directory.

What to verify

Under Americas, you should now see:

Partner

and the directory should contain the label:

access=external

Step 4 - Create Directory Human Resources under Eurasia

What to do

Go back to the Directories list.

Select Eurasia.

Click Create Directory.

Enter:

Name: Human Resources

Description: Human Resources Accounts

Parent: Eurasia

In the Labels section, add:

Key: access

Value: internal

Click Create.

Create Directory

Display Name* Description

Parent*

Advanced

Enable entitlement management Enable user management

Add labels to this directory. Values:

Explanation:

This creates Human Resources as a child directory under Eurasia.

The required label is:

access = internal

What to verify

Under Eurasia, you should now see:

Human Resources

and the label should be:

access=internal

Final Expected Directory Structure

After completing Task 1, your structure must be exactly like this:

Global Account

Americas

Partner

Label: access=external

Eurasia

Human Resources

Label: access=internal

Directories and Subaccounts Subaccounts (2)

Name	Type	Environment	Provider	Region	Labels	Changed On
BTP Admin Certification: XXXXX	Global Account					March 20, 2026, 6:56:2...
Americas	Directory					March 22, 2026, 4:25:1...
Partner	Directory				1 label	March 22, 2026, 4:29:2...
Eurasia	Directory					March 22, 2026, 4:26:0...
Human Resources	Directory				1 label	March 22, 2026, 4:31:0...

Important Checks Before Moving On

Verify all of the following:

Americas exists

Eurasia exists

Partner is under Americas

Human Resources is under Eurasia

Partner has label access=external

Human Resources has label access=internal

All names and descriptions are entered exactly as required

Common Mistakes to Avoid

1. Wrong parent

Partner must be created under Americas

Human Resources must be created under Eurasia

2. Wrong label key or value

Use exactly:

access → external

access → internal

3. Spelling errors

Be careful with:

Americas

Eurasia

Partner

Human Resources

4. Creating all directories directly under the global account

Only Americas and Eurasia are direct children of the global account.

Partner and Human Resources must be child directories.

QUESTION NO: 2

SIMULATION

Create a Service Instance in Cloud Foundry

Enable a service instance of the HTLM5 Application Repository Service for Cloud Foundry.

Create a Service Instance in a Cloud Foundry Environment

In your SAP BTP cockpit, in the EU HCM Dev subaccount, create the service instance html5-eu-hcm-dev for the HTLM5 Application Repository Service with the service plan app-host in the Cloud Foundry space activity-recording

Answer:

See the Explanation below for complete solution.

Explanation:

Before you start

Log in to SAP BTP Cockpit.

Open the correct Global Account.

Go to Directories.

Open Human Resources.

Open the EU HCM Dev subaccount.

This matters because the task must be completed in EU HCM Dev, and the service instance

must be created in the specific Cloud Foundry space activity-recording. SAP Help also confirms that the HTML5 Application Repository is used in the Cloud Foundry environment and that the app-host plan is the host service used to store HTML5 application content.

Step 1 - Open the Cloud Foundry space

In EU HCM Dev, go to:

Cloud Foundry

Spaces

Select the space:

activity-recording

SAP Help describes creating Cloud Foundry service instances by first navigating to the subaccount, opening Cloud Foundry Spaces, selecting the target space, and then using that space's Services > Service Instances are a.

Step 2 - Open Service Instances in the space

Inside the activity-recording space, go to:

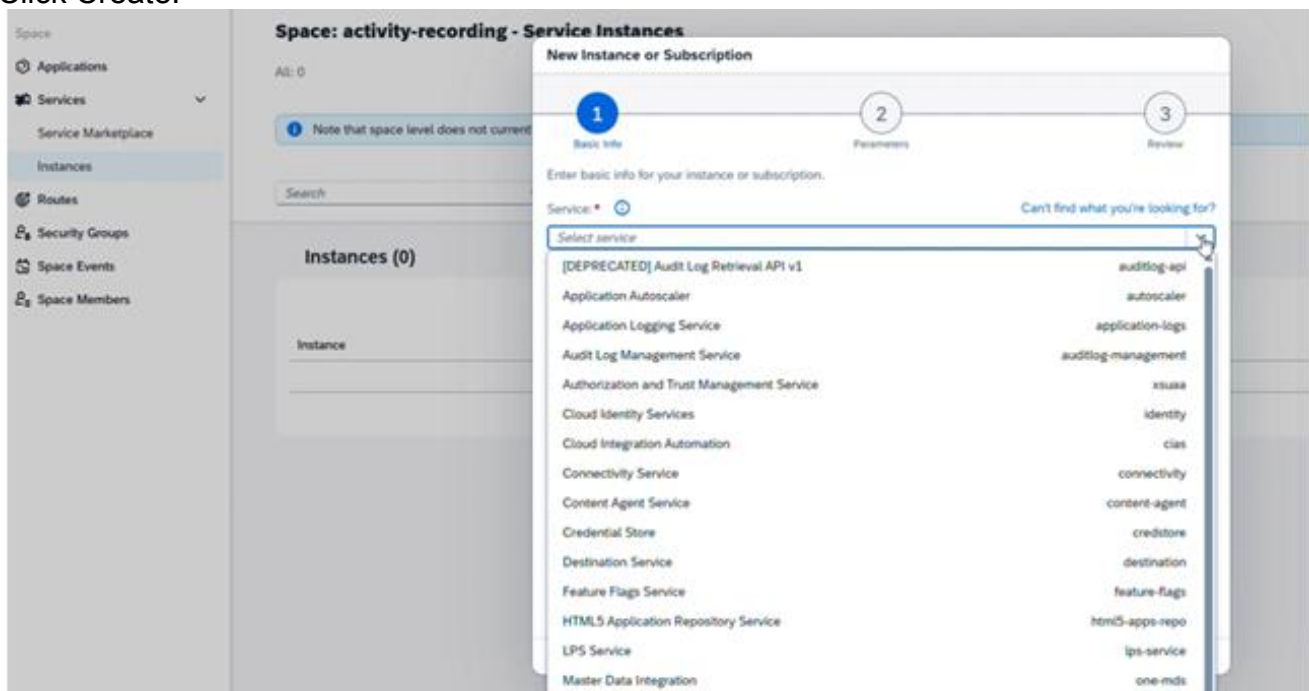

Services

Service Instances

This is the Cloud Foundry-space-level location used for creating service instances in that space.

Step 3 - Start creating the new instance

Click Create.

A wizard opens for the new service instance. SAP Help describes this as the standard cockpit flow for creating service instances in Cloud Foundry spaces.

Step 4 - Choose the required service

In the service selection, choose:

HTML5 Application Repository Service

SAP Help documents the HTML5 Application Repository as the service used for centrally storing HTML5 applications' static content on SAP BTP in the Cloud Foundry environment.

New Instance or Subscription

1 Basic Info 2 Parameters 3 Review

Enter basic info for your instance or subscription.

Service: * ⓘ Can't find what you're looking for?

HTML5 Application Repository Service

Plan: *

app-host

Instance Name: * ⓘ

html5-eu-hcm-dev

Next > **Create** Cancel

Step 5 - Choose the required service plan

Select the service plan:

app-host

SAP Help states that the app-host service plan is used to deploy applications to the HTML5 Application Repository.

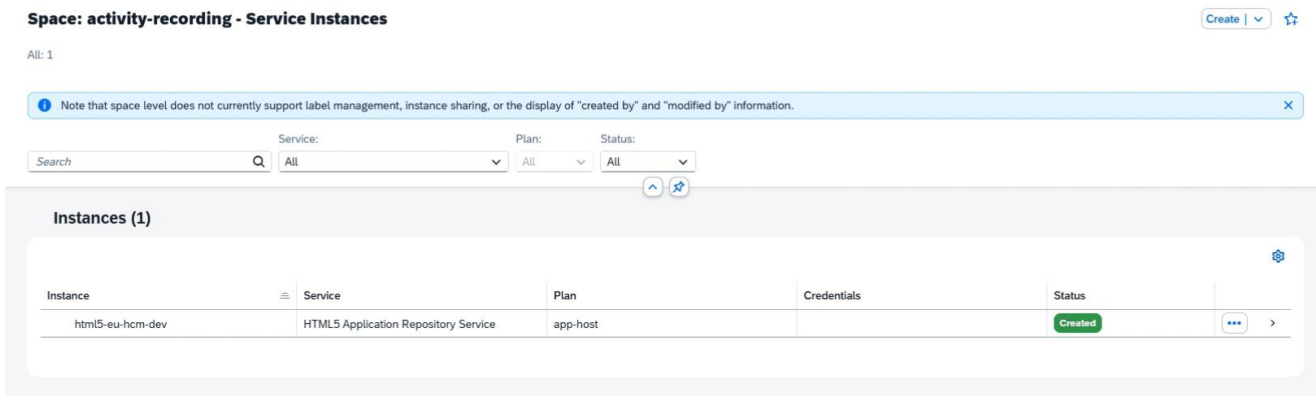

Step 6 - Enter the instance name

Set the service instance name to:

html5-eu-hcm-dev

Then continue and confirm creation.

SAP Help recommends using a CLI-friendly name for service instances, and the task gives the exact required name.

Step 7 - Verify the space is correct

Before final confirmation, verify the target Cloud Foundry space is: activity-recording

This is important because Cloud Foundry service instances are created within a specific space, not only at the subaccount level.

Step 8 - Create and confirm

Click Create or Finish.

Wait for the status to change from in-progress to created.

SAP Help notes that after creation, the instance appears in the service instances table and its status can be checked there.

Final expected result

Inside EU HCM Dev, in Cloud Foundry space activity-recording, you should have a service instance with:

Service: HTML5 Application Repository Service

Plan: app-host

Instance Name: html5-eu-hcm-dev

Common mistakes to avoid

Creating the instance in the wrong subaccount; it must be EU HCM Dev.

Creating it in the wrong Cloud Foundry space; it must be activity-recording.

Choosing the wrong service; use HTML5 Application Repository Service.

Choosing the wrong plan; use app-host. SAP Help specifically links app-host with hosting deployed HTML5 app content.

Typing the wrong instance name; use exactly html5-eu-hcm-dev.

The screenshot shows a list of subaccounts in the SAP Cloud Foundry console. The table has columns for Name, Type, Environment, Provider, Region, Labels, and Changed On.

Name	Type	Environment	Provider	Region	Labels	Changed On
BTP Admin Certification	Global Account					March 25, 2026, 5:11:2...
